

## Appendix 9 AI0013a - Chemical products used as additives in the production of plastic, rubber or silicone

To be used in conjunction with an application for a licence for the Nordic Swan Ecolabel of furniture and fitments.

This appendix applies to chemical products used as additives in the production of plastic, rubber or silicone. The requirement applies to additives actively added to the polymer raw material in the master batch or compound in production of plastic, rubber or silicone,

Name of the chemical product:
Function of the chemical product (e.g. resin):

Ingoing substances and impurities are defined as follows:

- Ingoing substances: All substances in the chemical product, including additives (e.g. preservatives and stabilisers) in the raw materials. Substances known to be released from ingoing substances (e.g. formaldehyde, arylamine, in-situ generated preservatives) are also considered as ingoing substances.
- Impurities: Residuals, pollutants, contaminants etc. from production, incl. production of raw materials that remain in the raw material or in chemical product in concentrations less than 1000 ppm (0,1000 w-%, 1000 mg/kg) in the chemical product. Examples of impurities are residues of the following: residues or reagents incl. residues of monomers, catalysts, by-products, scavengers, and detergents for production equipment and carry-over from other or previous production lines.

O89: Does the chemical product contain any of the following prohibited substances?	YES	NO
